

Computing: Intent and Vision

To aim to provide our pupils with the life-skills that will enable them to embrace and utilise new technology in a socially responsible and safe way. We want our pupils to be able to operate in the 21st century workplace and our aim is for them to leave Vernon Primary School being digitally literate. Our vision is that they will be able to use, express themselves and develop their ideas through information and communication technology and we also hope to ensure that they are developing a skill set which could be applicable for employment in later life.

We want children to become autonomous, independent users of computing technologies, gaining confidence and enjoyment from their activities. We strive to provide opportunities in all subjects to motivate and inspire pupils and raise standards across the curriculum through the use of information and communication technology. We want to ensure that our curriculum is fully inclusive to every child. Not only do we want them to be digitally literate and competent end-users of technology but through our computing lessons we want them to develop creativity, resilience, communication, problem-solving and critical thinking skills. We want our pupils to have a breadth of experience to develop their understanding of themselves as individuals within their community but also as members of a wider global community and as responsible digital citizens. We want all children to understand the importance of being ready, respectful and safe at all times, both in the real world and online.

Nobody else is quite like me'
